

Project Development Manager

## Stefan Glück

Stefan is an expert in project management for large scale utility projects and since 2014 also certified as Project Manager Professional (PMP) by the PMI.

Stefan started his professional career within the RWE Group as a trainee at RWE Power AG/RWE Technology GmbH. In the following years he gained experience in several power plant development and execution projects, also for external customers. His 6 years of practical experience within the RWE Group have led to his expert knowledge in conventional power plants (CCGT and hard coal) as well as the renewable energy sector (wind offshore and utility scale PV).

Stefan holds a Master of Science in Mechanical Technology as well as Industrial Engineering from the University of Albstadt-Sigmaringen in Germany and the University of Glamorgan in the UK.

### 1 What gives you most satisfaction in your work?

Bringing structure into complex projects and developing a way forward to find the optimal solution is what gives me most satisfaction. Facing new challenges for which individual and creative solutions are needed.

### 2 Why did you choose RWE TI?

To have the opportunity to work in various international complex energy projects with interdisciplinary and multinational project teams.

### 3 “Our aim is your outcome!” – What it means to me:

Delivering customer value is most important for me. Therefore, my aim is not just to find any solution, but the right one, tailor made for your challenge, for you.
