

Project Quality Engineer

Muhammed Bayindir

Muhammed is an expert in Quality Control and Assurance at RWE Technology International.

He has in-depth knowledge in personal welding and testing and nearly 20 years of experience in general plant constructions and power plants in Managing and Supervisory function.

The focus of his work is on Production Technology, Process Optimization, Welding Technology, Non-Destructive Testing, Quality Management (Control & Assurance) and Project Management.

Characterized by his international work in EMEA and South Africa Regions, Muhammed has intercultural competences combined with his extensive language skills in German, English and Turkish.

He completed his studies as an Engineer at the GSI – International Association for Welding Technology in Duisburg, Germany.

1 What gives you most satisfaction in your work?

The opportunity to participate in the realisation of the energy transition alongside a future-oriented company like RWE Technology International.

2 Why did you choose RWE TI?

Firstly to develop myself personally in a rapidly growing and intercultural team. Secondly to expand my knowledge at a operator site after long years of experience by a global manufacturer and thirdly to be part of a well future oriented company.

3 What three words best describes you?

Determined. Reliable. Quality-conscious action.

4 „You have the choice!“ – What it means to me:

My professional expertise in Quality Control and Assurance will give you the right support as needed. My knowledge of Welding and Testing and my 20 years of experience in general plant constructions and power plants in Managing and Supervisory function providing this fundamental background. I worked in EMEA and South Africa Regions and I am familiar with different cultures.
