

Head of Electrical, Instrumentation & Control Engineering

Udo Eickhoff

Udo is head of electrical and process control engineering at RWE Technology International and has more than 30 years of experience in automation and power engineering.

During his professional career, he has acquired extensive knowledge of different large-scale conventional power plants as well as energy storage and conversion systems (battery storage, power-to-heat, power-to-gas, etc.).

Through his international work, Udo has been able to gain country experience in European and non-European countries.

He completed his engineering studies in General Electrical Engineering at the University of Paderborn, Germany.

In addition, he is a certified expert for functional safety of processes and machines.

1 What gives you most satisfaction in your work?

To develop and implement innovative technology that helps to sustainably improve our environment.

2 Why did you choose RWE TI?

Within the RWE Group, RWE Technology International offers a very varied range of tasks. It allows me to learn new things, work with people from different cultures and actively shape the development of RWE's next generation.

3 What three words best describes you?

Inquisitive. Perseverance. Balanced.

4 “You get your best solution“ – What it means to me:

To consider as many aspects as possible for finding a solution and to find a balanced compromise.
