RWE

D-Central – pooling potentials

WE

offer D-Central, a smart technology platform, which markets untapped potential in the flexibilities market.

Attractive remuneration concept

Latest IT and pool infrastructure

Multi-market approach

Everything from a single source: RWE

YOU

have the technical capacity to successfully harness the potential of the platform.

Smart tech – innovative and scalable

- The VPP operated by RWEST comes from the latest generation of SCADA systems.
- Our state-of-the-art software enables us to react flexibly to the needs of the market at any time. This way, we also guarantee quick adaptation of your asset in case of changes to the market design or the market rules (e.g. change to the bidding procedure with little advance notice).
- Our goal is to provide and market the best-possible service for you.
- We factor in the utilisation restrictions defined by you in the event of a call-off.
- We offer you the best-possible modelling of your operational requirements with regard to all technical, economic and plant-specific properties.
- Your plant is put into operation and optimised flexibly with perfected processes.
- The control of your plant is connected to our pool in accordance with the requirements of the TSO and on the basis of our modern control and signalling technology.
- The modelling of your plant is required for the successful marketing of your power flexibilities and is coordinated by us.
- Reporting and communication is simplified with the D-Central web interface.
- Availability messages or information in the event of a fault are transmitted digitally.
- Relevant parameters and price data can be managed intuitively in your personal dashboard.

2

Attractive remuneration concept and pooling

- **Fixed compensation for the assigned and maintained performance of your technical unit regardless of whether or not your asset has been awarded a contract within the pool.**
- We remunerate you for the provision of services and the use of your equipment on the basis of terms that are transparent and comprehensible to you.
- Indexing of the tendering results of the market allows you to keep track of your revenue at all times.
- **You will know what revenue to expect in advance.**
- Pooling of technical equipment in a virtual power plant offers you benefits in terms of marketing and collateralisation.

3

Multi-market approach – multi-services (24/7)

- As one of the leading energy trading organisations in Europe, we offer you access to all energy trading markets and balancing power markets from a single source.
- Your unit is optimised and marketed within the market platform that makes the most commercial sense for you, having regard to your technical requirements.
- All information and data is collected in the RWEST Dispatch Centre. Our analysts, traders and dispatchers always keep track of all market and asset pool developments to maximise the value proposition of your technical unit for you.
