

Mine equipment engineering support

## Support Bulk Transport Copper Mines

**Location**

Chile

**Client**

Several Copper Mines

**Expertise**

Mining Equipment Engineering, Bulk Material Transport, Conveyor System, Transportation System Engineering

### Our Services

- Review of bulk ore transport systems
- Assessment of weak points
- Development of solutions to increase throughput
- Performance measurement
- Final report incl. options and recommendations

## Project description

For several copper mines in Chile, RWE experts have analysed the bulk ore transport systems (crushers, conveyors, reclaimers, silos) for weak points and developed a number of solutions to increase throughput to satisfactory performance levels.

RWE is one of the few engineering firms to fully understand how to analyse and develop bulk transportation concepts, as demonstrated on our various project assignments worldwide. Our great depth of engineering and operations knowledge entitles us to assist our clients in their specific conveyor system challenges including abrasive material, downhill conveying, overland conveying, high belt speeds and wide belts.
